About MITODERM

MITODERM is an Israeli company specializing in the development, import, and distribution of advanced technologies for professional aesthetics, skin, and scalp care.

The company collaborates with leading laboratories, manufacturers, and technology partners in Italy and South Korea to provide clinics in Israel with professional solutions that combine science, innovation, and advanced treatment protocols.

At the core of our portfolio are advanced technologies based on synthetic exosomes, peptides, PDRN, NAD+, and biomimetic ingredients, alongside BIOSPICULE™ technology, based on purified Spongilla-derived spicules that undergo rigorous purification and quality-control processes.

Bridging Science and Clinical Practice

MITODERM was founded on in-depth knowledge of skin biology and a genuine understanding of real-world clinical needs. We believe that high-level professional care goes beyond the treatment itself – it requires knowledge, a clear understanding of the mechanisms of action, and precise treatment protocols.

Therefore, alongside product development and distribution, we provide professional training, scientific education, and comprehensive treatment protocols tailored to individual needs.

Our Standards

Every product and technology introduced into the MITODERM professional portfolio is carefully evaluated according to our core principles: innovation, quality, safety, and ease of use.

We work closely and directly with our international professional partners throughout the entire process – from raw material selection and formulation development to the creation of a complete professional framework for clinical practice.

The Story Behind the Name

The name MITODERM was born from the connection between two worlds:

MITO – representing the cellular energy that drives function, renewal, and vitality.

DERM – representing the skin, where science and aesthetics come together.

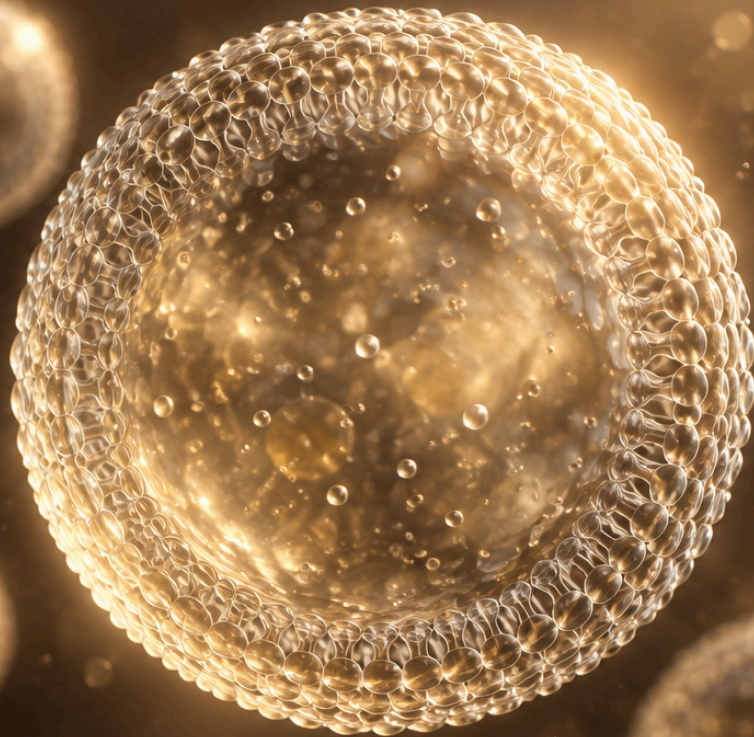

Just as every cell needs energy to function and reach its full potential, the world of aesthetics needs innovation, science, and professional knowledge to evolve.

MITODERM – WHERE SCIENCE MEETS BEAUTY

MITODERM

Synthetic Exosomes

Professional Facial Treatment

What are synthetic exosomes

MITODERM is the exclusive importer and distributor of VM Corporation in Israel. The Italian company specializes in advanced technologies based on synthetic exosomes, PDRN, and biomimetic peptides. VM products are marketed to medical professionals in more than 100 countries worldwide.

What Are Exosomes?

Exosomes are nanoscale extracellular vesicles involved in intercellular communication. They can carry a variety of biological molecules and facilitate their transfer between cells as part of natural cellular communication processes.

Synthetic exosomes are engineered delivery systems inspired by these biological mechanisms. Their structure is designed to mimic certain characteristics of natural vesicles, enabling selected active ingredients to be encapsulated and supporting their targeted and efficient delivery. The synthetic exosome technology developed in Italy functions as an advanced delivery system for carefully selected active ingredients, including PDRN, peptides, and other components chosen according to the purpose of each formulation.

The nanoscale structure is designed to protect the encapsulated ingredients, support their delivery, and enhance their penetration into the skin.

Advantages of Synthetic Exosomes

Unlike exosomes derived from human, animal, or plant sources, synthetic exosomes are not obtained from living biological material. Their engineered structure enables the encapsulation of selected active ingredients, including larger molecules whose delivery may otherwise be limited. This approach is designed to protect the active ingredients and support their effective delivery to the skin.

MITODERM

V-TECH SYSTEM

For professional use only

Professional Kit with Synthetic Exosomes

A professional treatment kit based on synthetic exosomes, developed using advanced Italian technology.

Synthetic Exosome Formula

The formula combines:

PDRN 2% (20 mg/ml), derived from salmon

Biomimetic peptide complex

Apple stem cell extract

Indications

Deep skin revitalization | Signs of ageing | Wrinkles and fine lines | Dull, tired-looking skin | Post-acne marks and scars | Post-surgical scars | Uneven skin texture and tone | Post-inflammatory hyperpigmentation (PIH) | Loss of elasticity | Skin firming | Supporting the skin barrier | Improving overall skin appearance

Pack Contents

Serum: 5 ampoules × 5 ml

Gel Mask: 5 sachets × 5 ml

Expected Results

Visible improvement in hydration and radiance from the first treatment. Skin structure, texture, and density continue to improve throughout the treatment course.

Healthy, fresh-looking skin | Long-lasting structural improvement | Firming | Improved texture and skin quality | Elasticity | More even-looking skin tone

V-TECH SYSTEM

Clinical Skin Regeneration at the Dermal Level

Active Ingredients

Synthetic Exosome Serum

PDRN 2%

Biomimetic Peptides: Acetyl Decapeptide-3 & Oligopeptide-20

Apple Stem Cell Extract (Malus domestica)

Gel Mask

Designed for use after the ampoule. No rinsing required.

PDRN 1% – Low Molecular Weight

Acetyl Heptapeptide-9 with Colloidal Gold

Copper Tripeptide-1

Snail Secretion Polysaccharides

Hyaluronic Acid

Aloe Vera

Treatment Protocol

In combination with **microneedling**

4 treatments, every two weeks

Recommended course: at least 4 treatments

Maintenance: once every six months

Treatment Areas

Face | Neck | Décolleté | Hands

Quantity: 1-1.5 ml per treatment

Additional Combinations

Microneedling | RF Microneedling | BIOSPICULE™ 10% | Laser CO₂

At the End of the Treatment

EXOCELL MASK | DERMA RECOVERY

Sun protection

Standard RF may also be used at the beginning of the treatment, before microneedling (optional).

EXO-NAD SKIN LONGEVITY PEEL

A three-stage biohacking system for skin renewal and improved skin appearance

EXO-NAD

A professional, multi-stage peeling system developed in VM laboratories in Italy, inspired by advanced research in cellular longevity and skin biohacking.

The system combines a biphasic peel, a neutralizer-restorer, and an advanced Longevity Serum containing synthetic exosomes, NAD⁺, biomimetic peptides, and carefully selected active ingredients that support the skin's natural renewal processes.

Three treatment stages work in sequence: removal of dead skin cells and skin renewal, rebalancing and recovery after the acids, followed by the application of an active serum designed to improve hydration, firmness, radiance, and the overall appearance of the skin.

The overall goal is to support the skin barrier throughout the treatment.

1. EXO BIPHASIC PEEL – Two-Phase Peel

A biphasic formula combining a lipid phase and an acid phase.

The lipid phase helps prepare the skin and maintain comfort during the treatment. The acid phase helps remove dead skin cells, improve skin texture, and support a controlled renewal process.

The formula contains a combination of active acids, including AHA and BHA, at a total concentration of approximately 30%, together with tranexamic acid and antioxidant ingredients.

2. pH NORMALIZER – Neutralizer & Restorer

A formula designed to neutralize the acids and rebalance the skin after the peeling stage.

The neutralizer combines ingredients that help support the epidermal barrier, including collagen, biomimetic peptides, and vitamin B12.

EXO-NAD SKIN LONGEVITY PEEL

3. LONGEVITY SERUM – Skin Longevity & Vitality

An advanced professional serum combining synthetic exosomes with NAD⁺, Epitalon, GHK-Cu, and biomimetic peptides.

The serum is designed to support cellular communication, cellular energy, and the skin's natural renewal processes. It helps improve the appearance of skin elasticity, hydration, and radiance, leaving the skin looking renewed, revitalized, and healthier.

Key Benefits

Removal of dead skin cells | Accelerated skin renewal |
Improved skin texture | Improved firmness and elasticity |
Reduced appearance of fine lines | Suitable for all skin types |
Suitable for Fitzpatrick skin types I–VI | Helps improve uneven skin tone | Suitable for melasma-prone skin | Helps improve the appearance of sun spots and age spots | Helps improve the appearance of PIH and post-acne marks | Enhances skin radiance | Ideal before special events | Suitable for mature, tired, and dull-looking skin | Anti-ageing benefits

Directions for Use

One treatment every 3–4 weeks

- Three-stage protocol tailored to the individual indication
- Suitable for all skin types and year-round use
- Can be used as a single treatment or as part of a treatment course

Combination with Devices:

Optional: May be combined with hydration-based treatments or devices.

At the End of the Treatment:

Sun protection
EXOCELL MASK | DERMA RECOVERY CREAM

Package Contents

Biphasic Peel – 15 ml
pH Normalizer – 5 × 5 ml
Longevity Serum – 5 × 5 ml

MITODERM

Package Contents: 5 masks

Active Ingredients

Synthetic Exosomal Structures

Polynucleotides

Hyaluronic Acid, Glycerol & Plant Oils

Plant Extracts & Algae Extract

Hexapeptide-8

Ubiquinone (Coenzyme Q10)

Nannochloropsis oculata Extract

Spilanthes acmella Extract

MITODERM | WHERE SCIENCE MEETS BEAUTY

EXOCCELL MASK

Advanced Bio-Cellulose Mask

Based on advanced adhesion technology, synthetic exosomal structures, and a complex of active ingredients that support hydration and soothing.

The mask was developed as a finishing step after professional cosmetic treatments, particularly when the skin requires intensive hydration and support of the epidermal barrier.

It is suitable for post-procedure protocols, especially for dry, tired, sensitive, or devitalized skin.

Its thin, flexible bio-cellulose structure adheres evenly to the skin with minimal air pockets. This close contact creates a moist environment and allows continuous contact between the active serum and the skin throughout the treatment.

The result is a feeling of comfort and freshness, leaving the skin hydrated, smooth, supple, and radiant.

Key Benefits

Intensive and immediate hydration | Soothing after professional treatments |
Supports the epidermal barrier | Cooling and refreshing effect | Helps reduce
the feeling of dryness | Smoothing and firming effect | Leaves the skin looking
fresh, calm, and deeply hydrated

Integration into Professional Treatment Protocols

The mask is particularly suitable as a soothing finishing step after professional and advanced aesthetic treatments.

Synthetic Exosomes

Professional treatments - scalp

EXOSIGNAL HAIR

Professional Synthetic Exosome System for Scalp Treatments

A professional formula developed in the VM Corporation laboratories in Italy for intensive scalp care and support of the hair follicles.

The formula combines an advanced delivery system based on synthetic exosomal structures, high-concentration PDRN, hyaluronic acid, eight biomimetic peptides, plant stem cells, vitamins, and antioxidants. It was developed to support scalp health, encourage hair growth, and provide a synergistic combination of active ingredients that helps reduce hair shedding and slow further hair loss.

The Multi-System Action of EXOSIGNAL HAIR

Care for the scalp environment – the formula helps maintain a balanced, well-hydrated scalp.

Increased blood vessel formation and enhanced nourishment of the scalp, helping improve the supply of oxygen and nutrients to the hair follicles.

Support for existing hair follicles, renewal and revitalization of dormant follicles, helping support healthier hair growth.

The active ingredients help extend the anagen phase and shorten the telogen phase, supporting the natural hair growth cycle.

Key Active Ingredients

Synthetic exosomal structures

High-molecular-weight hyaluronic acid

Biomimetic peptides:

SH-Oligopeptide-1/2

SH-Polypeptide-1/9/11

Acetyl Decapeptide-3

Copper Tripeptide-1 (GHK-Cu)

Oligopeptide-20

Plant stem cells from Swiss apple (*Malus domestica*)

Vitamins:

Panthenol – Provitamin B5

Biotin – Vitamin B7

Pyridoxine – Vitamin B6

Thiamine – Vitamin B1

PDRN 2% (20 mg/ml), derived from salmon

Package Contents

5 ampoules × 5 ml

Scalp | Follicle | Hair

EXOSIGNAL HAIR

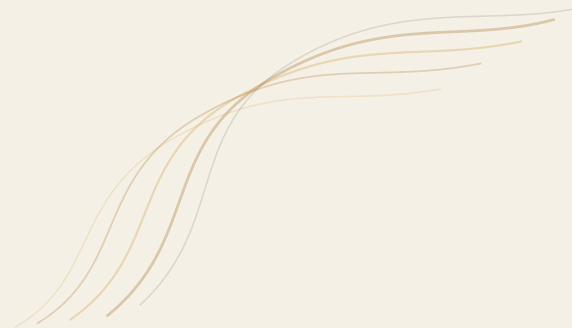

Who Is the Treatment Suitable For?

Designed for men and women experiencing:
Increased or seasonal hair loss | Thinning hair and reduced hair density | Fine, weak, or lifeless hair | Dry, oily, or unbalanced scalp | Androgenetic alopecia | Alopecia areata
Before or after a hair transplant

Combination with Professional Equipment

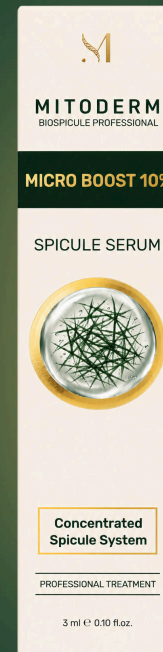

Designed to be combined with a professional scalp microneedling device, such as MITOPEN.

MITODERM

BIOSPICULE - BIOMICRONEEDLING

4TH GENERATION

BIOSPICULE™ – What is Spongilla?

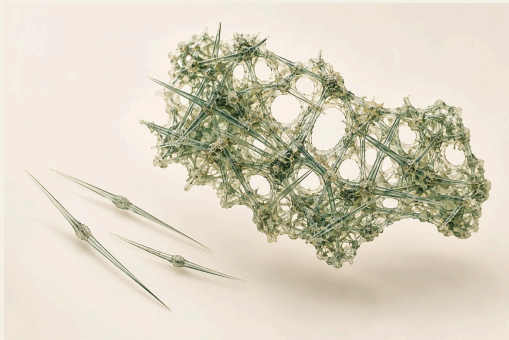

Spongilla is a genus of freshwater sponges belonging to the phylum Porifera. Unlike the vast majority of sponges, which live in the sea, this genus is found in lakes, streams, and other freshwater environments. Despite its plant-like appearance, it is a simple aquatic animal with no nervous system, organs, or muscles.

The sponge has a skeleton that supports its structure and consists of two main components:

Organic fibres, mainly a collagen-like protein called spongin.

Tiny mineral needles made of silica, called spicules.

Spongilla is the sponge; **spicules** are the microscopic needles that form its skeleton.

Millions of micro-needles penetrate rapidly and reach deep into the skin

Millions of micro-needles penetrate the skin to a depth of 80–300 microns, reaching the epidermal layers. This mechanical stimulation activates **microcirculation**, accelerates cellular **metabolism**, and supports the skin **renewal** cycle.

Under the microscope, tiny spicules can be seen within the skin.

They may remain for up to 72 hours, providing continued mechanical **stimulation** and supporting collagen production, epidermal repair, cellular metabolism, and skin renewal.

Indications

Anti-ageing | Wrinkles and fine lines | Enlarged pores | Firming | Brightening | Uneven skin tone | Post-inflammatory hyperpigmentation (PIH) | Senile lentigo | Scars | Post-acne scars | Mild to moderate acne | Thin, devitalised skin | Dull, sallow skin | Renewal and nourishment | Face | Neck | Décolleté | Hands | Back

Micro-needle treatment can serve as an alternative to traditional microneedling.

BIOSPICULE™ – The Fourth Generation of Spicule Technology

What Makes Us Different?

Spongilla-based technologies depend on several key factors:

The purification level of the spicules.

The size of the spicules and the ratio between different lengths.

Their precise concentration in each product.

Traditional Spongilla powder is a single, non-uniform mixture containing the entire raw material.

Our approach:

Fourth-generation BIOSPICULE™ technology uses **four types** of Spongilla. Through an advanced Korean processing method, unwanted residues are removed, while the microscopic structures are purified and sorted according to their characteristics and size.

This allows us to control the structure and characteristics of the spicules with greater precision. **Every bio-needle matters.**

Why Does Purification Change Everything?

Rather than focusing only on the quantity of Spongilla, our technology also considers the architecture of the spicules – their length, the balance between short and long structures, and how this combination influences the distribution of mechanical stimulation across different layers of the epidermis.

This is where a natural raw material becomes a precise cosmetic technology.

Under the microscope, each spicule has a porous structure with an elongated microscopic inner cavity, almost like a miniature cannelloni. This unique architecture makes the spicule more than a mechanical element: it becomes part of a controlled delivery system.

By controlling different spicule lengths within the formula, BIOSPICULE™ combines mechanical stimulation with targeted cosmetic delivery. This structure forms the basis of the Hybrid Spicule Delivery System.

Two Parallel Mechanisms of Action

Skin Renewal – Resurfacing

During massage, the spicules penetrate the stratum corneum, creating controlled mechanical stimulation. This supports the gradual removal of dead skin cells, improves skin texture and appearance, and prepares the skin for active ingredients applied later in the treatment.

The mechanical action of the spicules helps improve the appearance of roughness, enlarged pores, dullness, and uneven texture.

Delivery – Cosmetic Delivery System

The spicules create temporary microscopic pathways in the outer layers of the skin, supporting more effective delivery of active ingredients applied during the treatment.

The aim is not only to create a peeling effect, but to transform the renewal stage into a precise cosmetic delivery pathway — BIOMICRONEEDLING.

Biological micro-spicules may remain in the skin for up to 72 hours, providing continued mechanical stimulation.

Spicule → Resurfacing → Delivery

MITODERM

MICRO BOOST 10%

10%

BIOSPICULE™

Professional In-Clinic Treatment

The most **concentrated professional** serum in the BIOSPICULE™ range. Designed exclusively for in-clinic use, it comes in a 3 ml syringe, allowing the aesthetician to control the amount of product, massage duration, and treatment intensity according to the skin diagnosis.

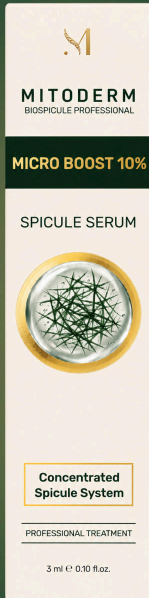

The formula contains 10% Hydrolyzed Sponge and combines two groups of spicules:

40% Mini Spicules, approximately 80–100 microns in length.

60% Long Spicules, approximately 300–360 microns in length.

The combination of short and long spicules creates different levels of mechanical stimulation. Short spicules act mainly in the outer layers of the epidermis, while longer spicules provide a more intense stimulus and reach deeper layers of the skin.

The aesthetician therefore works not merely with a peel, but with a BIOMICRONEEDLING delivery system – a professional approach combining skin **renewal** with the **delivery** of active ingredients.

MITODERM | WHERE SCIENCE MEETS BEAUTY

Who Is the Treatment For?

Subject to professional assessment:

Anti-ageing | AGING | Dull, tired skin lacking vitality | Rough or uneven texture | Enlarged pores | Uneven skin tone | Post-acne scars | Surgical scars | Pigmentation and sun spots | Post-inflammatory pigmentation (PIH) | Wrinkles, fine lines and signs of ageing | Loss of elasticity and firmness | Smokers' skin | Mild to moderate acne | Firming | Improvement in overall skin quality

Due to the high concentration of spicules, a characteristic tingling sensation may occur during treatment and in the days that follow, particularly upon contact with the skin. Temporary redness, dryness, tightness, or varying degrees of peeling may also occur.

Professional In-Clinic Combinations

The structure of the spicules and the massage technique create temporary microscopic channels, allowing the treatment to be combined with:

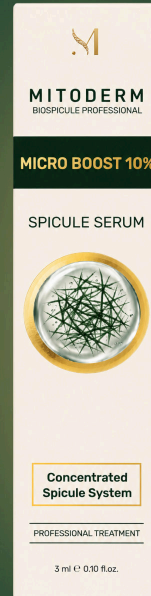

V-TECH or Longevity Serum

Treatment Finish:

EXOCELL MASK

DERMA RECOVERY CREAM – also mandatory for home use to support the epidermal barrier and reduce dryness and tightness

Sunscreen

Complementary home care

Line: synthetic exosomes

Line: BIOSPICULE™

EXOTECH GEL

EXOSIGNAL SPRAY

CELL RENEW 1.5%

CELLULAR AGE
DEFENSE 2.5%

DERMA RECOVERY
CREAM

Synthetic Exosome Line

EXOTECH GEL

EXOSIGNAL SPRAY

Complementary products designed to be integrated into professional treatment protocols and home-care routines, according to the recommended protocol

EXOTECH GEL

Cellular Recovery & Advanced Skin Renewal

Complementary home care for skin recovery, hydration, and renewal

A continuation of professional care at home — designed to support the skin's renewal processes and help maintain the results achieved in the clinic.

EXOTECH GEL is an advanced home-care gel developed to continue and support the processes initiated during professional treatments in the clinic. The formula combines synthetic exosomes with hydrating, repairing, and anti-ageing ingredients that work in synergy to improve the appearance and texture of the skin. They help support skin elasticity, vitality, and overall skin quality.

The lightweight gel texture provides a fresh, hydrating feel without weighing down the skin. Suitable for daily use.

Active Ingredients

- Synthetic exosomes
- PDRN polynucleotides
- Biomimetic peptides, gold, and copper
- Hyaluronic acid
- Purified polysaccharides of snail origin

Volume: 30 ml

Indications

- Suitable for normal to combination skin
- Dry or dehydrated skin
- Tired, dull-looking skin lacking vitality
- Skin showing signs of ageing and fine lines

Protocol

Designed to complement the daily skincare routine, particularly after professional treatments in the clinic. It can be integrated into a treatment programme that includes V-TECH, EXO-NAD, and the BIOSPICULE™ line

EXOSIGNAL SPRAY

Follicular Support & Scalp Maintenance

Advanced home-use spray for continuous scalp and hair support between professional treatments.

The link between clinic treatments and home care – for continuous support of the scalp environment and follicles.

EXOSIGNAL SPRAY combines active ingredients designed to maintain a balanced scalp environment, nourish the hair, and support optimal conditions for the natural hair growth cycle.

Suitable for daily use, rapidly absorbed, and requires no rinsing.

Key Benefits

Supports scalp balance and follicle activity | Helps relieve dryness and discomfort | Supports fuller, stronger, healthier-looking hair | Provides targeted care for thinning or weakened areas | Easy, even application directly to the scalp

Recommended For

Women and men experiencing hair thinning | Fine, brittle or weakened-looking hair | Scalp imbalance | Hair loss and thinning programmes | Home care between EXOSIGNAL HAIR treatments | Maintenance after a professional treatment course | Care following hair transplantation

Deeply nourishing scalp spray
HOME USE • 15 ml

MITODERM

BIOSPICULETM series

CELL RENEW 1.5% – home-care serum for renewal and brightening

CELLULAR AGE DEFENSE 2.5% – advanced serum for firming and anti-ageing

DERMA RECOVERY CREAM – repairing cream for soothing and skin barrier support

CELL RENEW 1.5%

1.5%

BIOSPICULE™ SERUM

At-Home Serum for Skin Renewal and Brightening

A spicule serum designed to gradually introduce the skin to an advanced renewal routine, with a focus on achieving a more radiant, smooth, and even-looking complexion.

The formula combines a moderate concentration of spicules with ingredients that promote hydration and freshness while helping improve skin texture and tone. During massage, a gentle, characteristic tingling sensation may occur due to the mechanical contact of the spicules with the outer layers of the skin.

This is not an ordinary at-home peel. The spicules provide moderate mechanical stimulation and support the renewal processes of the skin's surface, while the active ingredients in the formula provide complementary support for skin renewal, rebuilding, radiance, and a more even appearance.

Indications

Suitable for all skin types | Fresh, radiant-looking skin | Dull and tired-looking skin | Improved skin texture | Enlarged pores | Younger-looking skin | Improvement of uneven skin tone | Hyperpigmentation | Post-inflammatory marks | Skin renewal and brightening | Anti-ageing | Improvement in the appearance of wrinkles and fine lines | Firming

MITODERM

Advanced Biospicule Technology
30 ml e 1.0 fl.oz.

MITODERM | WHERE SCIENCE MEETS BEAUTY

CELL RENEW 1.5%

BIOSPICULE™ SERUM

Home-Care Serum for Skin Renewal and Brightening

Key Active Ingredients

Hydrolyzed Sponge – Spicules at a Concentration of 1.5%

Microscopic needle-like structures that provide controlled cosmetic mechanical stimulation to the skin. They support the gradual removal of dead skin cells and prepare the outer layers of the skin to receive the formula.

Niacinamide

A multifunctional ingredient that supports the skin's moisture barrier and helps improve the appearance of uneven skin tone and enlarged pores. It helps leave the skin looking calm, even, and refreshed.

Galactomyces Ferment Filtrate

A yeast-fermented filtrate widely used in Korean skincare. It supports a smooth, vital, and radiant skin appearance, helping improve the overall look and feel of the skin.

Sodium DNA

Purified DNA fragments derived from rice. They help retain moisture, support the epidermal barrier, and contribute to a smoother, more supple, and revitalized skin appearance.

Salicylic Acid + Citric Acid

A combination of salicylic acid and citric acid that helps renew the skin's surface, improve rough texture, reduce the appearance of enlarged pores, and promote a brighter, more even-looking complexion.

Sodium Hyaluronate, Glycerin & Betaine

A combination of moisturizing ingredients that helps attract and retain water in the outer layers of the skin, reduce the feeling of dryness, and leave the skin feeling softer and more supple.

How to Use

For daily use on clean, dry skin. Massage gently until absorbed. A mild, characteristic tingling sensation may occur during application. There is no need to apply firm pressure or rub the skin.

After applying the serum, follow with Derma Recovery Cream. During the day, always apply sunscreen to complete the routine.

MITODERM

Advanced Biospicule Technology
30 ml e 1.0 fl.oz.

MITODERM | WHERE SCIENCE MEETS BEAUTY

CELLULAR AGE DEFENSE 2.5%

BIOSPICULE™ SERUM

Advanced Serum for Firming and Anti-Ageing

Developed for skin that requires a more intensive care programme, combining a higher concentration of spicules with Bakuchiol, five peptides, and moisture-supporting ingredients.

Compared with CELL RENEW 1.5%, this serum provides a more intensive and noticeable treatment experience, with a focus on the appearance of signs of ageing and fine lines.

Suitable For:

All skin types | Improved appearance of wrinkles and fine lines | Anti-ageing | Improved elasticity and overall skin quality | Tired, dull-looking skin lacking vitality | Uneven or rough skin texture | Reduced appearance of enlarged pores | Firming and brightening | Improved appearance of post-acne scars | Mild to moderate acne.

2.5%

CELLULAR AGE DEFENSE 2.5%

BIOSPICULE™ SERUM

Advanced Serum for Firming and Anti-Ageing

Key Active Ingredients

Hydrolyzed Sponge – 2.5% Spicule Concentration

The spicules support skin renewal and prepare the outer layers of the skin to receive the formula's active ingredients.

Bakuchiol

A plant-derived ingredient with retinol-like properties. Helps improve the appearance of fine lines, skin texture, and tone, supporting a smoother, firmer, and more even-looking complexion.

Five Peptides:

Acetyl Hexapeptide-8 | Acetyl Tetrapeptide-5 | Palmitoyl Tetrapeptide-7 | Palmitoyl Tripeptide-5 | Carnosine
Help improve the appearance of firmness and elasticity, support skin hydration and freshness, and improve the appearance of wrinkles and fine lines.

Hydrolyzed Collagen Extract

Helps retain moisture and leaves the skin feeling supple and refreshed.

Adenosine

A well-known anti-ageing ingredient widely used in Korean cosmetics, helping improve the appearance of fine lines.

Yeast Beta-Glucan

Yeast-derived beta-glucan that helps soothe the skin, retain moisture, and support the skin barrier.

Akebia Quinata and Camellia Japonica Extracts

Plant extracts that support a healthy, vital, and radiant skin appearance while providing antioxidant support to the formula.

Directions for Use

For daily use. Apply to clean, dry skin and massage gently. A noticeable tingling sensation may occur, particularly upon contact with the skin. Do not rub vigorously.

After applying the serum, follow with Derma Recovery Cream to support the skin's moisture barrier and maintain a comfortable, hydrated feel. Sunscreen must be applied during the day.

For skin that is not yet accustomed to the product, a gradual transition from CELL RENEW 1.5% to CELLULAR AGE DEFENSE 2.5% is recommended, according to individual skin tolerance.

DERMA RECOVERY CREAM

SNAIL COLLAGEN

Restorative Cream for Soothing and Skin Barrier Support

A restorative cream that provides hydration and nourishment for daily use. Designed as a complementary cream for professional treatment protocols and daily skincare routines, particularly after the use of products containing spicules.

The cream itself contains no spicules, and its role is complementary: it provides hydration, softness, and comfort while supporting the epidermal barrier during the skin renewal process.

Indications

Completion of the professional V-TECH SYSTEM protocol | After an invasive in-clinic procedure | Completion of a professional in-clinic treatment with Micro BOOST 10% | After a home-care routine from the BIOSPICULE™ range, including CELL RENEW 1.5% and CELLULAR AGE DEFENSE 2.5%

Who Is Derma Recovery For?

Provides hydration for all skin types | General hydration after an in-clinic treatment | Hydration for dry or dehydrated skin | Hydration for skin requiring additional support after a professional spicule treatment | Skin with an irritated, rough, or flaky appearance | Skincare routines requiring hydration, nourishment, and soothing

MITODERM

Daily nourishing collagen cream for
healthy-looking glow
50 ml e 1.69 fl.oz.

MITODERM | WHERE SCIENCE MEETS BEAUTY

DERMA RECOVERY CREAM

SNAIL COLLAGEN

Restorative Cream for Soothing and Skin Barrier Support

Key Active Ingredients

Panthenol

Provitamin B5 that retains moisture, relieves dryness and discomfort, and promotes softness and suppleness.

Madecassoside

Derived from *Centella asiatica*, it soothes, strengthens the moisture barrier, and provides antioxidant benefits.

Allantoin

Soothes and softens while reducing roughness and improving texture after cosmetic renewal procedures.

Shea Butter

Rich in essential lipids, it reduces moisture loss and leaves the complexion soft, nourished, and supple.

Niacinamide

Strengthens the skin barrier, improves moisture retention, and promotes a calm, even, healthy-looking complexion.

Hydrolyzed Collagen

Forms a moisture-retaining layer that enhances smoothness, suppleness, and a replenished feel.

Snail Secretion Filtrate – Purified Polysaccharides from Snail Mucin

Binds and retains water, providing lasting hydration, softness, comfort, and a refreshed appearance.

Professional Clinic Equipment

MITOPEN Professional Microneedling Device

**MITOSCAN Advanced System for Scalp and Hair
Diagnostics**

MITODERM

MITOPEN

Professional Microneedling Pen

MITOPEN is a professional cordless microneedling pen that creates temporary micro-channels, providing a pathway for MITODERM active ingredients. Combined with professional formulas, it supports effective delivery and enables a precise, uniform treatment protocol.

- Adjustable needle depth: 0.25–2.5 mm – tailored to the treatment area, skin thickness, and indication.
- Up to 5 adjustable speeds – allowing control over micro-channel density and stimulation intensity.
- Ergonomic cordless design – for comfortable, quiet, and precise clinical use.
- Designed to support the delivery of active ingredients.

V-TECH SYSTEM

EXOSIGNAL HAIR

MITOSCAN

Hair & Scalp Diagnostic System

An advanced high-magnification system for professional hair and scalp analysis, featuring $\times 50$ and $\times 200$ magnification.

MITOSCAN provides a clear assessment of hair density, follicle count, hair diameter, and scalp condition. High-definition imaging and consistent tracking allow professionals to photograph specific areas, reveal details invisible to the naked eye, and compare changes over time.

How Does MITOSCAN Enhance Professional Practice?

With MITOSCAN, the patient can clearly see the condition of the scalp and hair under high magnification from the beginning of the treatment process. This provides a clear starting point and allows the professional to explain findings based on visible scalp analysis rather than visual impression alone. It helps align expectations, establish realistic goals, and build a personalized treatment plan.

A tool for trust and documented results – during the initial assessment, the professional can show the patient the findings directly on screen and provide a clear explanation. This makes it easier to understand the need for a course of treatments, follow the recommended protocol, and realistically assess progress over time, increasing confidence and satisfaction.

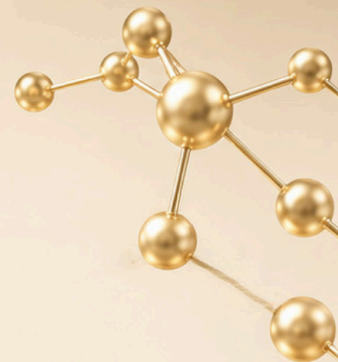

MITOSCAN. Measure What Matters.

Where Science Meets Beauty

MITODERM develops advanced professional solutions for the aesthetics industry, combining scientific expertise, innovation, and cutting-edge technology. Our extensive experience enables us to create products and protocols that adhere to the highest standards of quality, efficacy, and safety
