MITOTECH® CELL BOOSTER

Advanced skin to cell delivery technology

USER GUIDE

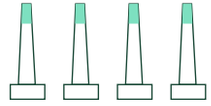

User guide

MITOTECH® CELL BOOSTER Lifting Kit is designed for users to experience high-performance derma care in the clinic or at home. It consists of freeze-dried powder with concentrated derma actives and a boosting ampoule. Essential derma actives include hyaluronic acid, collagen and anti-wrinkle peptides for anti-aging care and aged skin. For best efficacy, the powder is freeze-dried at –70°C. The boosting ampoule was specifically developed to dissolve the freeze-dried powder of concentrated derma actives.

Kit contents

Concentrated Powder
(Freeze-Dried)
154 mg × 4

Applicators
4 pcs

Boosting Ampoule
15 mL × 4

How to Prepare

1 OPEN THE VIALS

Remove the caps from the freeze-dried powder vial and the boosting ampoule.

2 DO NOT SHAKE

Slowly add 15 mL of boosting ampoule to the powder vial. Be careful not to overflow. Do not shake.

3 LEAVE FOR 1 HOUR

Allow the powder to dissolve and activate. Leave for at least 1 hour without shaking.

4 SHAKE HARD

Upon activation, the mixture turns cloudy. Replace the cap with the applicator and shake hard to mix well.

5 APPLY

Lightly press the applicator to dispense the product.

Bubbles may form when you shake it hard. Use with confidence; this is normal.

Ensure 100% efficacy

1. One vial of freeze-dried powder is for two weeks of use. Best efficacy is ensured for two weeks after mixing.
2. You may use other products before and after this product in your skin-care routine and professional treatments.
3. You may apply twice to achieve fast improvement in areas with deep wrinkles or sagging.
4. You may apply intensively to wrinkle-prone areas, such as around the eyes, mouth and neck.

FAQ

Why should it be left for 1 hour before shaking?	The freeze-dried powder contains hyaluronic acid, collagen and peptides. It should be allowed to dissolve and form a unique active structure. Shaking the product hard may disrupt formation of the active vehicle structure. If you leave it for about an hour or longer and allow it to dissolve slowly, you may experience the best efficacy of the product.
After applying it, my skin feels tight. Is that okay?	After using this product, you may feel tightness for a few minutes or a few hours. This is a sign that the ingredients of the concentrated powder are being naturally absorbed into the skin. Please use it with confidence.
